Lecture 05 - Feature Extraction

Prof. André Gustavo Hochuli

gustavo.hochuli@pucpr.br aghochuli@ppgia.pucpr.br

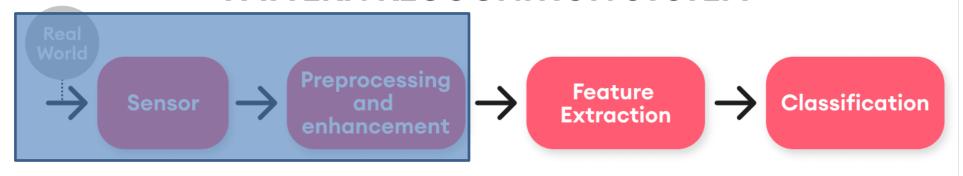

Topics

- [Recap] Lecture 04 Finding Components
- Lecture 05 Feature Extraction
 - Feature Vector / Embeddings / Representations
 - Feature Space
- Feature Engineering
- Descriptors
- Practice

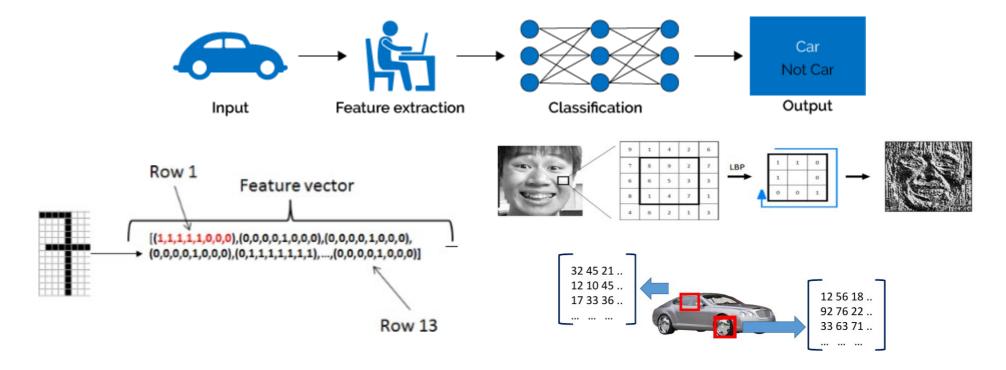

Computer Vision & Pattern Recognition Pipeline

PATTERN RECOGNITION SYSTEM

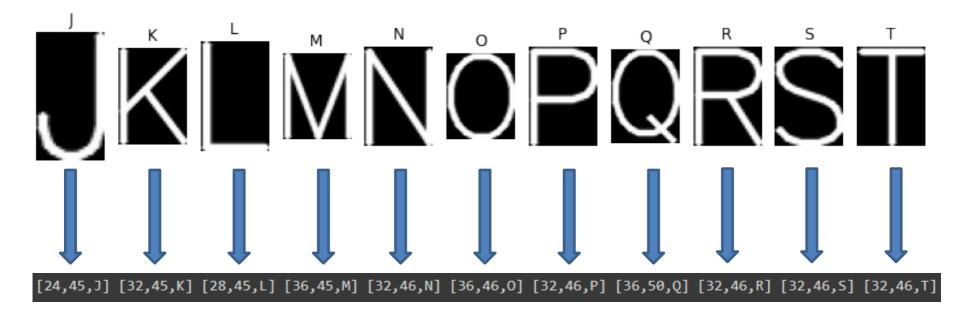

Feature Extraction

- A feature descriptor translates high-dimensional data to a a low dimension feature space
- A feature vector represents the input data produced by the feature descriptor
- Later, a machine learning model will learn the representations

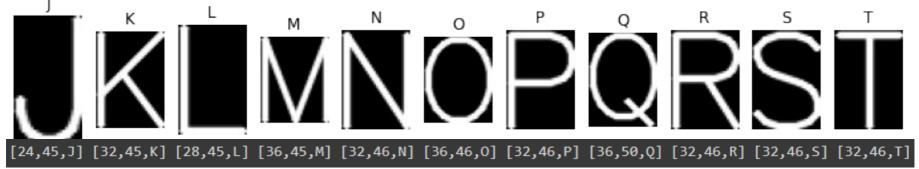

Feature Extraction

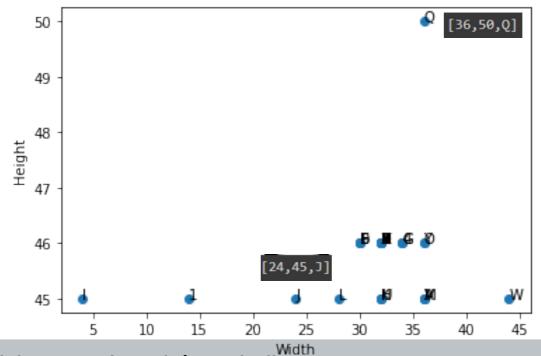

- Let us represent an image by its dimensions. Thus, an image 'I' belonging to class 'X' can be represented as:
 - f(I,X) = [I.width,I.heigth,X]

LET'S CODE: Lecture_05_Feature_Extraction_Projections.ipynb

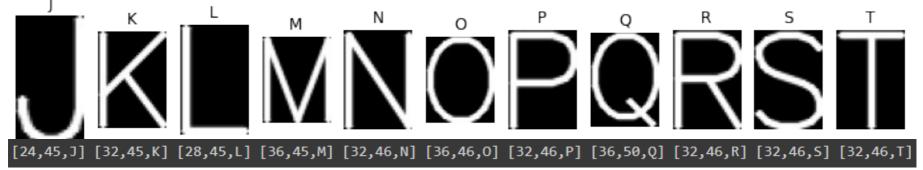

• Does this feature vector provide a representative encoding of the image?

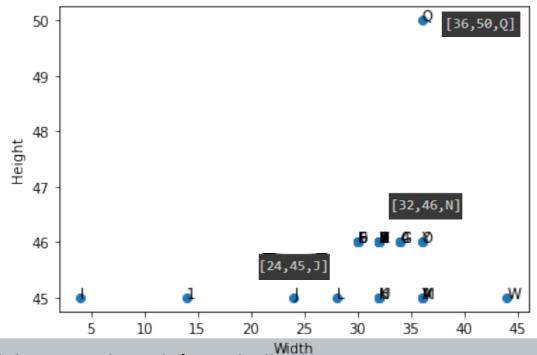

Computer Vision - Prof. André Hochuli

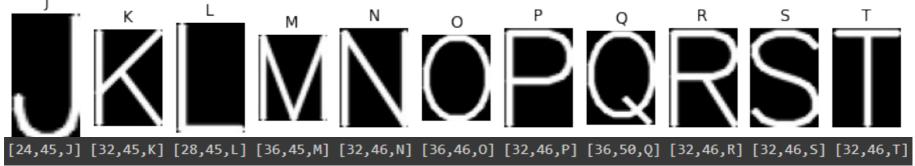

• Does this feature vector provide a representative encoding of the image?

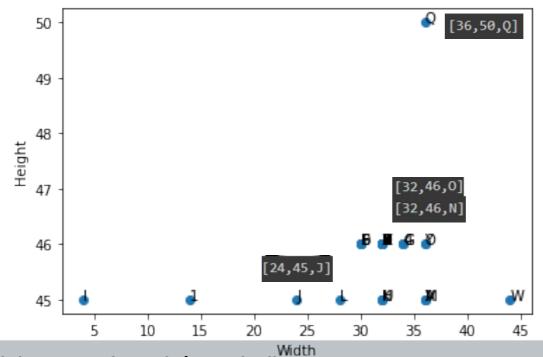

Computer Vision - Prof. André Hochuli

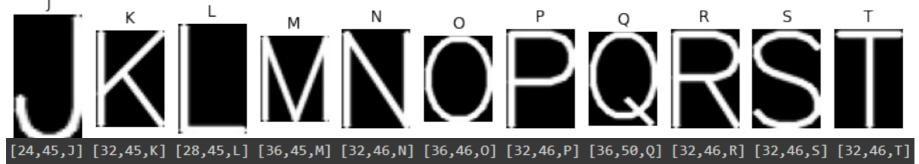

Does this feature vector provide a representative encoding of the image?

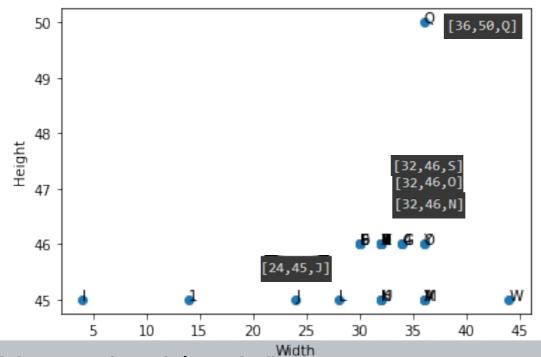

Computer Vision - Prof. André Hochuli

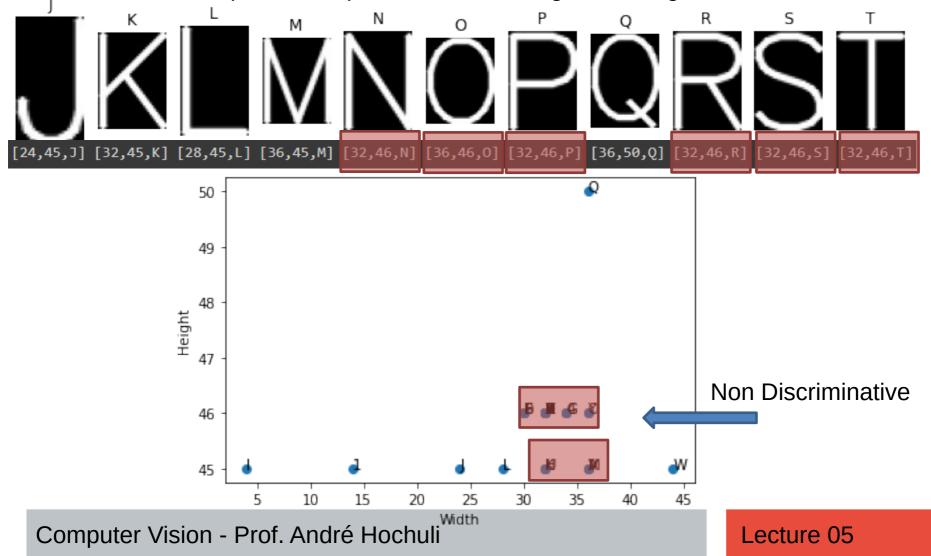

• Is the feature vector representative?

Computer Vision - Prof. André Hochuli

Does this feature vector provide a representative encoding of the image?

Feature Engineering

- How to produce a discriminative feature space?
- Features must describe a singular characteristic of the problem for good generalization.

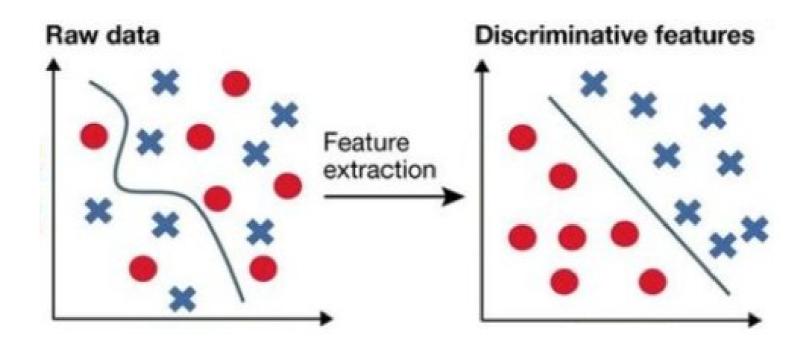

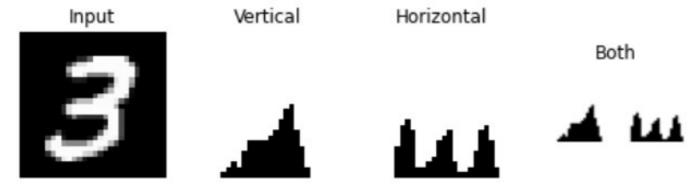

Image Descriptors - Shape/Edges

- Gradient Based
 - Projections

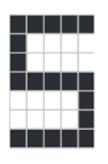

Convolutional (Filters)

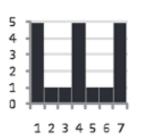

Image Descriptors

Vertical and Horizontal Projection

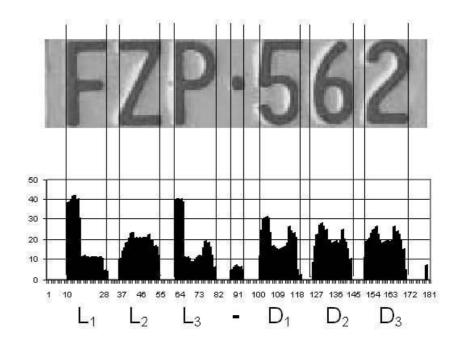

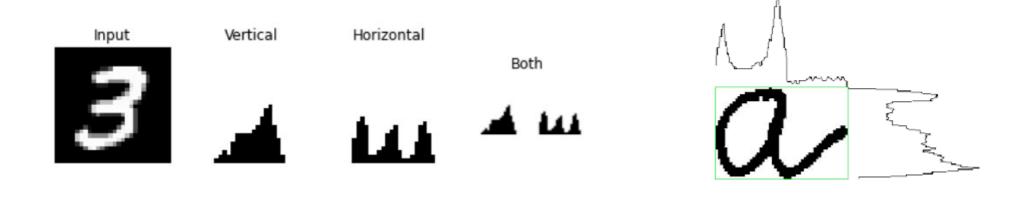

LET'S CODE: Lecture_05_Feature_Extraction_Projections.ipynb

Image Descriptors - Shape

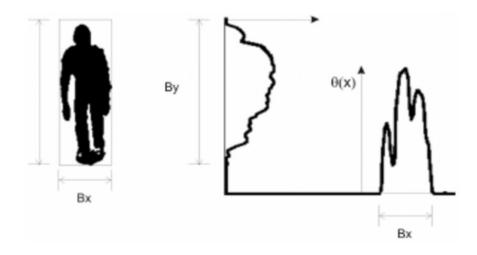

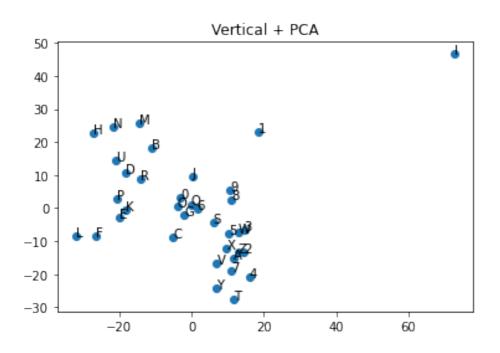

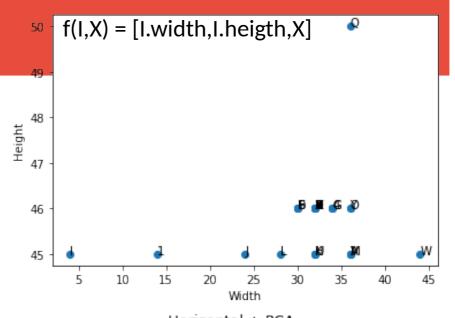

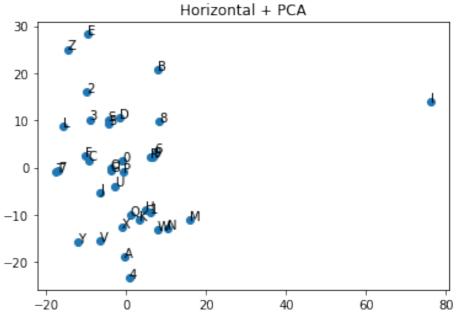

Image Descriptors

Vertical and Horizontal Projection

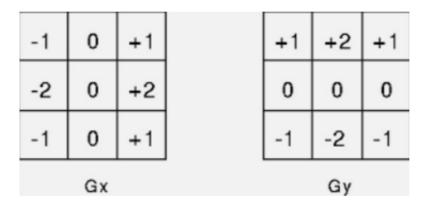

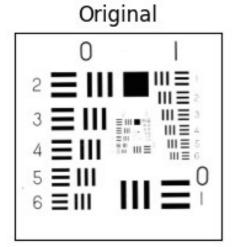

Computer Vision - Prof. André Hochuli

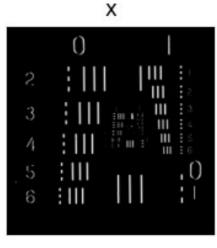

Image Descriptors - Edges

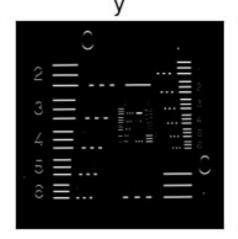

Let's Code: Lecture_05_Image_Descriptors_Edges.ipynb

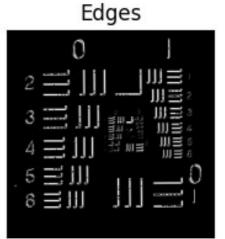

Sobel Filter

Computer Vision - Prof. André Hochuli

Image Descriptors – Edges

Sobel Filter

-1	0	+1	+1	+2	+1
-2	0	+2	0	0	0
-1	0	+1	-1	-2	-1
Gx			Gy		

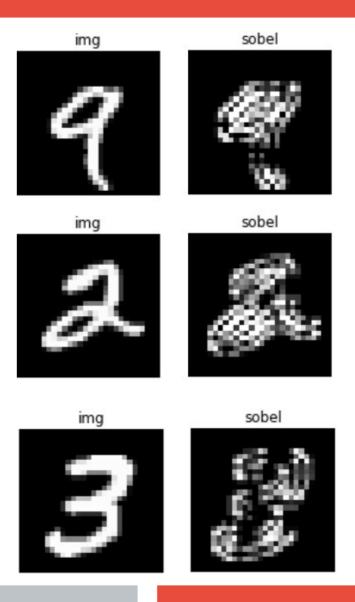

Image Descriptors - Edges

Laplace

$$\left[egin{array}{cccc} 0 & 1 & 0 \ 1 & -4 & 1 \ 0 & 1 & 0 \ \end{array}
ight]$$

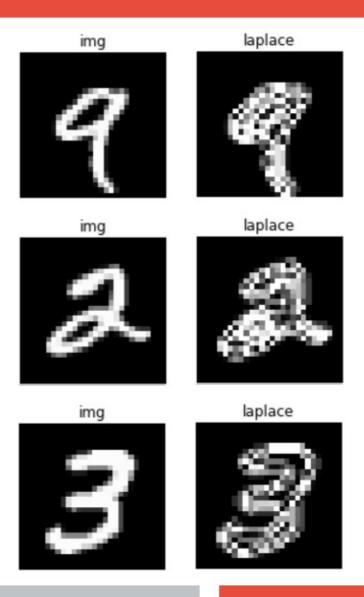

Image Descriptors - Edges

- Canny (John F. Canny 1986)
 - Gaussian Gradient Based Filter
 - Gaussian Blur
 - Gradient Detection

$$\mathbf{B} = \frac{1}{159} \begin{bmatrix} 2 & 4 & 5 & 4 & 2 \\ 4 & 9 & 12 & 9 & 4 \\ 5 & 12 & 15 & 12 & 5 \\ 4 & 9 & 12 & 9 & 4 \\ 2 & 4 & 5 & 4 & 2 \end{bmatrix} * \mathbf{A}.$$

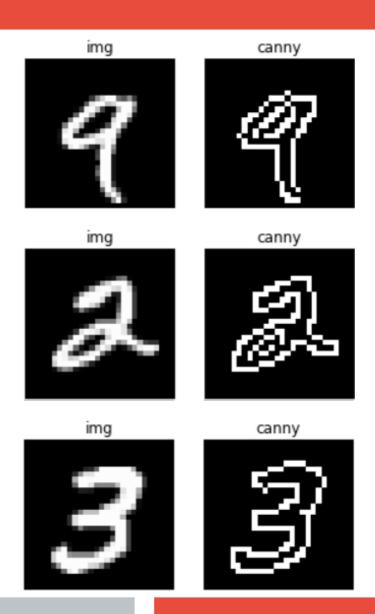

Image Descriptors – Edges

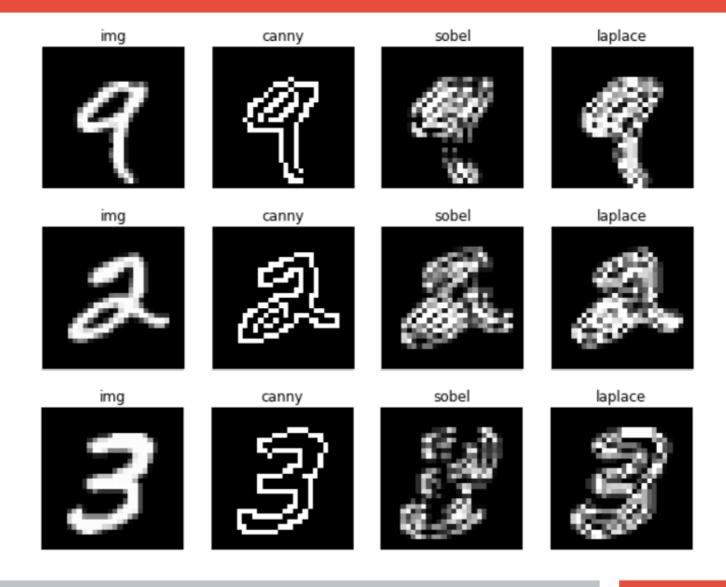

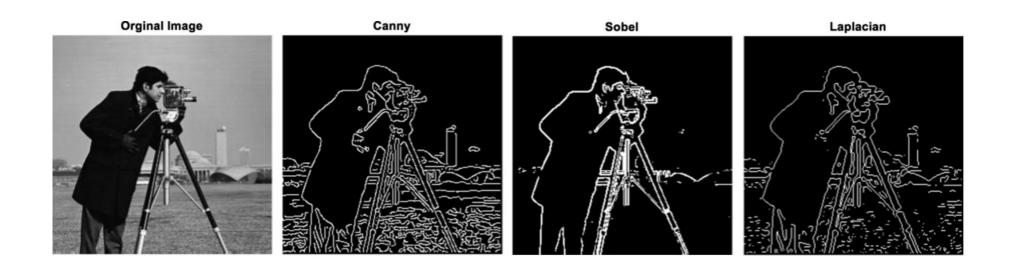

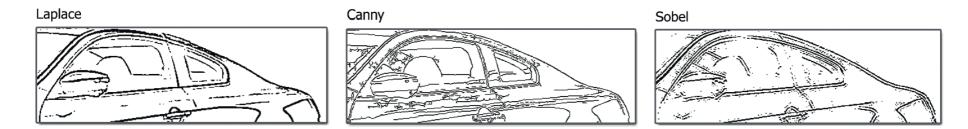

Image Descriptors – Edges

Let's Code: Lecture_05_Image_Descriptors_Edges.ipynb

Image Descriptors - Shape

Let's Code: Lecture_05_Image_Descriptors_Texture_and_Others.ipynb

- Moments
 - Values that carry both spatial and intensity information (shape)
 - Weighted average of all pixel's intensities
 - I(x,y) \square pixel coordinates of input
 - Powers, p and q, are the weights of the horizontal and vertical dimensions
- HuMoments (Hu 1962)
 https://github.com/andrehochuli/teaching/blob/main/ComputerVision/Lecture%2005%20 %20Feature%20Extraction/Lecture_05_Image_Descriptors_Texture_and_Others.ipynb

$$\begin{split} h_1 &= \eta_{20} + \eta_{02} \\ h_2 &= (\eta_{20} - \eta_{02})^2 + 4(\eta_{11})^2 \\ h_3 &= (\eta_{30} - 3\eta_{12})^2 + 3(\eta_{03} - 3\eta_{21})^2 \\ h_4 &= (\eta_{30} + \eta_{12})^2 + (\eta_{03} + \eta_{21})^2 \\ h_5 &= (\eta_{30} - 3\eta_{12})(\eta_{30} + \eta_{12})[(\eta_{30} + \eta_{12})^2 - 3(\eta_{03} + \eta_{21})^2] + (3\eta_{21} - \eta_{03})(\eta_{03} + \eta_{21})[3(\eta_{30} + \eta_{12})^2 - (\eta_{03} + \eta_{21})^2] \\ h_6 &= (\eta_{20} - \eta_{02})[(\eta_{30} + \eta_{12})^2 - 7(\eta_{03} + \eta_{21})^2] + 4\eta_{11}(\eta_{30} + \eta_{12})(\eta_{03} + \eta_{21}) \\ h_7 &= (3\eta_{21} - \eta_{03})(\eta_{30} + \eta_{12})[(\eta_{30} + \eta_{12})^2 - 3(\eta_{03} + \eta_{21})^2] + (\eta_{30} - 3\eta_{12})(\eta_{03} + \eta_{21})[3(\eta_{30} + \eta_{12})^2 - (\eta_{03} + \eta_{21})^2] \end{split}$$

Image Descriptors - Shape

- HoG Histogram of Oriented Gradients
 - Computes the gradient and orientation of edges
 - Use a kernel to compute the Gradients (i.e 9x1)
 - Patch-Based Histogram (8x8, 16x16..)

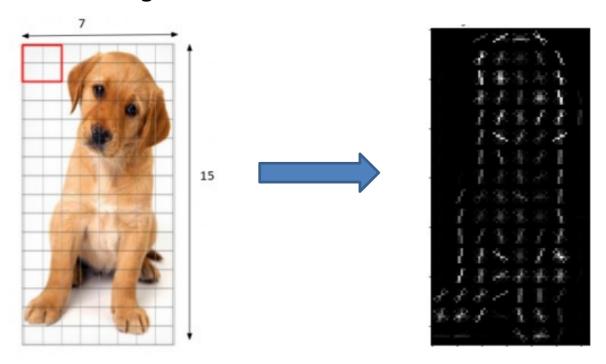

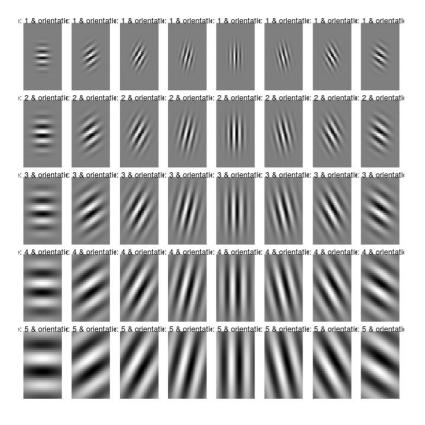

Image Descriptors - Texture

- Gabor Filters
 - Convolves the image using several Gaussian Kernels (Kernel Bank)

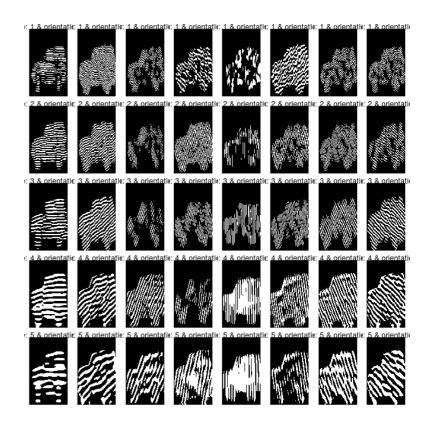

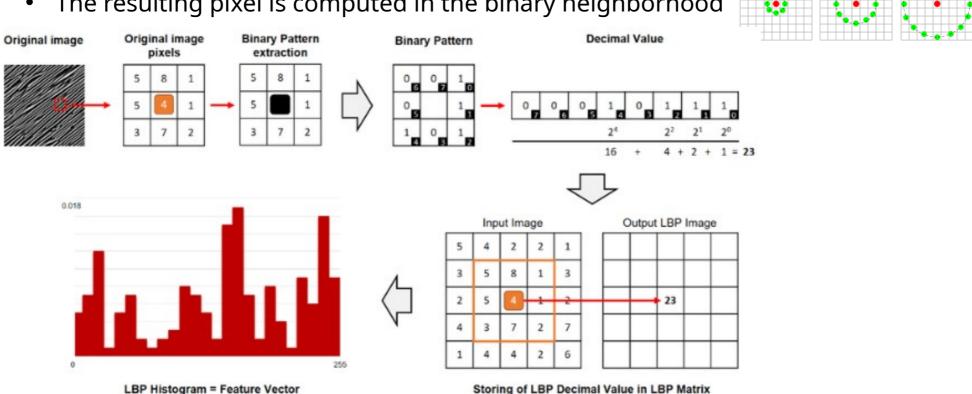

Image Descriptors – Texture

- **Local Binary Patterns**
 - Convolves the image using a Circular Kernel
 - The resulting pixel is computed in the binary neighborhood

Let's Code: Lecture_05_Image_Descriptors_Texture_and_Others.ipynb
